

Model ASC - DC interface cable Installation Instructions

This optional interface cable may be used to supply DC power to a second Model ASC Equalizer. Using this cable will eliminate the need for two power modules.

If this optional cable is used, only ONE power module is required to power two ASC's.

Do not connect the other power module to the second unit.

The installation of this cable is easy:

- Step 1. If you have (2) ASC equalizers, then you have (2) ASC power modules. Take one of the power modules and put it away...you don't need it. You only require one power module for this installation.
- Step 2. Connect one end of the gray DC interface to the connection marked "AUX DC I/O" on ASC #1. This plug and respective connector are keyed so they will fit in only one direction.
- Step 3. Connect the other end of the gray DC interface cable to the connection marked "AUX DC I/O" on ASC #2. This plug and respective connector are keyed so they will fit in only one direction.
- Step 4. Connect the power module to the "POWER" connection on only ONE of the ASC's. ASC #1 will power ASC #2 by way of this interface cable.
